

# **Yields Falsehood**

**when preceeded by its own quotation**

Harshad Deo  
Piyush Ahuja

# A priori

# Tackling Consciousness

Two types of consciousness -  
*phenomenal* (P-consciousness) and  
*access* (A-consciousness)

- P-consciousness
- A-consciousness.

Not an all -or-nothing phenomenon, but a  
spectrum

# Simulation

Are you conscious now?

The philosophy department is no longer allowed to keep pets.

# Mirror Test

The mirror test is a measure of self-awareness, as animals either possess or lack the ability to recognize themselves in a mirror.

# **Thought Experiment**

1. Mirror test extended to machines
2. Chatbots in Conversation

# Dreams and Consciousness

1. There is little or no control over what one dreams about. If one intends to dream on a particular subject, the likeliness of having that dream decreases drastically.
2. There is a state where one becomes aware of being in a dream. But that state is rare and difficult to sustain, and it is virtually impossible to interfere with the dream or control it.
3. In some instances, people seem to experience/see stuff in dreams that they haven't experienced/seen in real life. Examples : a stranger, an unfamiliar song
4. Sometimes there's a slow transition from the conscious to unconscious or sleep state, where normal or real thoughts which one has control over slowly turn into absurd uncontrollable thoughts characteristic of dreams towards the state of sleep.

# Conclusion
